

MySQL

Create an SSH jail by creating the file `/etc/fail2ban/jail.d/mysql.local`. Paste in the following config, adapt it to your needs

```
[mysqld]
log = /var/log/mysql/access.log
log_error = /var/log/mysql/error.log
log_warnings = 2
```

Start and reload SSHD, and then add your jail

```
sudo fail2ban-client start
sudo fail2ban-client reload
sudo fail2ban-client add mysql
```
